Home: sabrinaphillips@bellsouth.net

Research Area: Computational Science and Mathematics

Research project includes involvement in development of the ORNL second generation Weigh-In-Motion (WIM) system. As developers begin the alpha and beta testing phase of this process, all software will be operationally tested in the context of an integrated WIM system. During this process, additional ancillary and system code proper will be designed, developed, and tested. Additionally, all system design documentation will be reviewed and validated and user documentation will be generated.

Research Mentor:
Robert Abercrombie, Ph.D.
Computational Sciences and Engineering Division
Oak Ridge National Laboratory
